# How much time do you spend checking meds?

The MDM series of medication detection machines checks each pouch visually utilizing a library built from your own formulary. Pouches are imaged and verified using high-speed cameras, making sure that the right pills are going to the right patient.

Any anomalies are flagged for further inspection by a pharmacist for final verification, drastically reducing the amount of time your staff spends handling and verifying medications. Our innovative MDC system allows pharmacists to quickly and easily check imaged pouches visually, further increasing safety and improving your workflow.

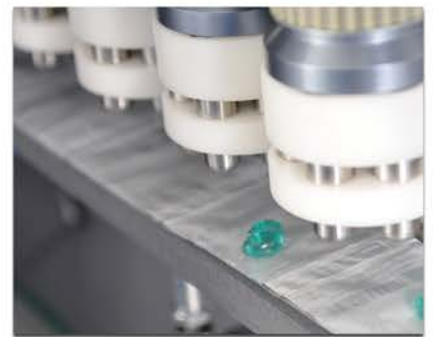

## MDM 1

- Self-contained countertop unit, detect up to 48 pouches per minute
- Digitally check flagged pouches without handling pouch strips for improved workflow
- Stores image and patient data of each pouch for accountability and record keeping
- Instantly search records for patient medication data

## MDM 2

- Free standing unit, image and detect up to 75 pouches per minute
- Available winder / unwinder for increased workflow efficiency
- Built-in separator unit for even more accurate first detection
- Adapts to changes in your formulary
- Includes all of the MDM 1 features

## MDM Pro

- The fastest, most reliable, and efficient verifier available
- All-in-one - Combines detection, sorting, and rolling
- Automatic winder with user defined batch cutting
- Automatic rolling and taping yields a ready-to-ship product
- Includes all MDM 1 and MDM 2 features

**Check, verify, and clear flagged pouches remotely with our MDC Medication Detection Check-Out software!**
